Introduction to Nsauditor Network Security Auditor

Nsauditor Network Security Auditor is a tool that allows network administrators and users quickly and easily perform a network security audit. The program combines the functions of a port scanner and a security scanner. Nsauditor is a set of network tools useful in diagnosing networks and monitoring network connections, capable of performing real-time traffic and protocol analysis, showing detailed listings of all TCP and UDP endpoints of the system, including the owning process name, loaded modules, kernel objects, memory details, remote address and state of TCP connections. It's a Swiss Army knife for everyone interested in a set of powerful network tools for everyday use. It also lets you create reports that can be used to fix security issues on a network
