Http Traffic Generator

Http TrafficGen is a tool that generates an http traffic to the specified **URL** . You should specify **HTTP Request Parameters** packet **Count** and **Interval** between two packets.

Click on the button **Start** to start traffic generation . To stop the process click on the button **Stop**.

The image shows a Windows-style dialog box titled "Http Traffic Generator Dialog". It has a blue title bar with a close button (X) in the top right corner. The main area is light beige and contains the following elements:

- A text input field labeled "URL:" containing the text "http://www.somewhere.com".
- A section header "HTTP Request Parameters (used default proxy settings)".
- Two input fields: "Count:" with the value "1" and "Interval:" with the value "1000".
- The text "ms" following the interval field.
- Two buttons: "Start" and "Stop".
- A large empty text area at the bottom of the dialog.
