

## Net Configuration

This dialog allows you to see the information about the local host and network. Host information, such as, host name, domain name, DNS servers list, node type, scope ID, routing enabled/disabled state, proxy enabled/disabled state, DNS enabled/disabled state and adapter information, such as, interface name, adapter type, IP address, subnet mask, mac address, adapter name, autoconfig enabled/disabled state, wins enabled/ disabled state, etc. are available.

Host Fixed Information	
Host Name	admin
Domain Name	
DnsServers List	212.165.126.49
Node Type	0
Scope Id	
Routing Enabled	No
Proxy Enabled	No
Dns Enabled	No

  

Per Adapter Information	
Interface Name	WAN (PPP/SLIP) Interface
Type	PPP adapter
IP Address	10.12.64.161
SubNet Mask	255.255.255.255
Mac Address	00:53:45:00:00:00
Gateways	10.12.64.161
PrimaryWinsServers	
SecondaryWinsServers	
Adapter Name	{8CFE1EF3-2D45-4094-AF7F-...}
DnsServers	212.165.126.49
DHCPs	
DHCP lease start Time	Thursday, January 01, 1970
DHCP lease expire Time	Thursday, January 01, 1970
Autoconfig Enabled	Yes
Autoconfig Active	No
Wins Enabled	No

Ok Refresh Next

To refresh the information on the dialog click on the **Refresh** button.

To iterate through adapters click **Next**. In this case the fields describing adapter information will contain the next adapter's parameters.
