Process Monitoring

Process monitoring is a tool to monitor the system process information. This dialog contains the list of process(applications and services) currently running on a local computer.

Process	Monitoring Dialog	×
Process Monitoring Select Process From List	Select Process From List 1176 explorer.exe Displays the list of the processes currently running on computer and shows the program name, the unique process ID, full path to the program's executable file, name of the file manufacturer, and the name of modules and kernel objects.	
1	OK	

To monitor the process information select the process name form the list. The <u>Process</u> <u>Details</u> dialog will appear in the screen.
